

Heavy Fabrication Manager

Established company is seeking a motivated individual who has the ability to develop/enhance a heavy fabrication division. This position requires an experienced manager with a background in heavy steel and alloy fabrication to include various welding processes and standards. Individual must possess a strong knowledge of various fabrication standards with emphasis on critical dimensional tolerance weldments requiring post fabrication machining. The division manager will be expected to develop and grow this division through hiring the appropriate direct labor personnel and evaluate the performance of the personnel in that division. Candidate shall be able to maintain project budgets and schedule work to satisfy critical delivery requirements. This position will require the ability to evaluate shop backlog for current and projected labor and material costs at each step of process flow to determine/project final cost and achievable schedule commitments. Individual must possess the ability to organize and schedule labor staff to correctly manage safety performance, 1st time quality, on time delivery and cost commitments. Capable to breaking projects down to daily resource assignments (JAGS) used as clear accountable direction. Candidate must have experience with Microsoft Office to include Word, Excel and Project.

Must be a U.S Citizen
